Plastic Fantastic

Do you know how to check If a woman Is pregnant In Africa. You stick a baguette up her pussy, pull it out & look for bite marks.

Ok, that's a bit far fetched. But we all originate from African continent. Way back In time we climbed down from the trees and started our great big walkabout Into the world. The earth existing for million of years & then we came, humans. Capable of destroying the whole thing with bombs & pollution In a heartbeat. Its a no brainer, and I absolutely hate racism. What are we doing !

There Is a good egocentrism & there is really bad egocentrism. I salute the people who actually do something about it. As I see this Is like if we all start cleaning up waters from plastic and chemical pollution. If we all start being aware of what we throw away of garbage. DON`T THROW PLASTIC IN NATURE ! It won't decay like organic material. Sort all garbage. It can on its own be a total new business. Clean up the oceans ! Stop the pollution ! What If we used our genial brains to do something about It. And stop the fucking racism, STOP !

A big part of my childhood was spent In the mountains of Norway. Im used to the cleanest water you can think of. Fresh breathing air & beautiful spectacular nature. Fishing, hunting, mountain hiking & In winter time skiing. No we Norwegians are not born with skis on our feet. But we are quite good at It, among a lot of other things. And we also use a lot of our oil profit on human Aid, renewable energy research & environment cases.

We used to be vikings & a lot of us still got the viking blood running In our veins. A humans lifespan is just a little bit of a bark In time. What If we think: How do we want to leave this planet for the future. How do you want to be remembered. How do we want to leave It for our future humans & animals. Because most humans cant think that far ahed. We are to egocentric minded. We clear It up & don't become the cancer cell of the universe. We travel and discover the ultimate frontier of space. We don't want to bring our no brainer shit out there. Because we are going to explore It, we are humans. We can be great, we dare. We have always been on a walkabout. We are not going to be the cancer cell !

No I can't alone change the world, I just want to be apart of saving the planet !
